

COMP261 Assignment 4 Report

- What worked
 - Everything up to the 85% mark. Ran all the bad programs at their stages respectively and they all worked. The output is seemingly correct judging by the code too. Error cases are handled.
 - I added a couple more tests in S3 before I started the assignments to test whether the elif statements and barrelLR/barrelFB expression parameters were working. Beyond that I probably could have done some more testing but time was an issue. Had to go out on a whim and say it works.
- What didn't
 - Challenge. Ran out of time, otherwise would have done it. Should have started earlier but was busy with 223 report so had to rush it.
